## **Select Medicare Advantage Members Receive In-Home Diabetes Screening Kits**

This July, Florida Blue Medicare will work with Quest Diagnostics to send blood glucose (A1c) and diabetic urine protein test (kidney screening) kits to select Medicare Advantage members. The kits will be sent to patients living with diabetes who have not completed these important screenings this year.

Quest screening kits provide a safe and convenient way for members to complete their blood glucose and diabetic urine protein test in the convenience of their home.

Here are some additional details:

- Members will receive a letter and kit with instructions on how to complete and return their sample.
- The program is completely voluntary.
- Members can earn gift cards through HealthyBlue Rewards for completing their screenings: \$20 for A1C screening and \$15 for kidney screening.
- Lab results will be sent directly to members and to their primary care doctors.
- Quest will send an email or postcard as a reminder to members who have not returned the kit.

Members enrolled in BlueMedicare Complete (HMO-DSNP) are not included in the Quest In-Home Kit mailing and should contact their DSNP case manager or talk to their doctor to discuss screening options.
