are readable. If errors are found, a TA1 response transaction will be sent to notify the trading partner that the file could not be processed provided the file contains a code value of one (1) in the ISA14. No TA1 response transaction will be sent for error-free files.

Once Truli for Health determines that the file is readable, validation is performed on the interchange control header (ISA) and interchange control trailer (IEA) loop information. If these segments have a non-standard structure, the file will receive a full file reject and the TA1 response transaction will be sent to the trading partner, provided the file contains a code value of one (1) in the ISA14.

**999 Functional Acknowledgement Transactions**

If the file submission passes the ISA/IEA pre-screening above, it is then checked for ASC X12 syntax and HIPAA compliance errors. When the compliance check is complete, a 999 will be sent to the trading partner informing them if the file has been accepted or rejected. If multiple transaction sets (ST-SE) are sent within a functional group (GS-GE), the entire functional group (GS-GE) will be rejected when an ASC X12 or HIPAA compliance error is found.
